

# Levelrock Applications

## The professional poured flooring solution

Designed exclusively for professionals, the LEVELROCK family of poured flooring products includes floor underlayments, primers and sealers and sound attenuation products. Each LEVELROCK product is created to work with one another to provide first-rate fire- and sound-rated assemblies.

### Fire and Sound

Designing assemblies requires a balance between acoustic separation and fire protection - both elements are important to prevent owner and builder liability. Insulation thickness, placement in the cavity, and resilient channel spacing must all conform to the limits specified in the UL design.

LEVELROCK products and systems are designed to meet the new International Building Code (IBC) and the first to ensure that all sound systems are fire-rated and easily specified by a UL Design number. LEVELROCK floor underlayment systems provide 1- and 2-hour fire-resistance ratings for wood-framed floor/ceiling assemblies and up to 3- and 4-hour ratings for structural concrete assemblies.

LEVELROCK floor underlayments are divided into four applications categories: general, radiant heat, corrugated steel deck and decorative. Choose an application below to view the floor underlayments available.

### General Applications

From our most economical, yet durable LEVELROCK® 2500 floor underlayment to the innovative LEVELROCK® 4500 NXG™ floor underlayment, you'll find a range of fast-applying, high-strength floor underlayments for multi-family to institutional applications.

### Radiant Heat Applications

LEVELROCK® RH and Commercial RH floor underlayments are created for use with radiant heat systems and are also available in green formulations.

### Corrugated Steel Deck Applications

Designed for buildings with light-gauge steel frame construction and direct application to corrugated steel decks, several LEVELROCK® CSD® floor underlayments are available, including LEVELROCK® CSD® EARLY EXPOSURE™ floor underlayments, for expedited scheduling.

### Decorative Applications

The strongest LEVELROCK floor underlayments available, LEVELROCK® PROFLOW™ and QUIK-TOP™, are also decorative floor underlayments that may be used as a finished floor with an approved coating.
